

**CPT 237: Program Feedback**

Name:    Marcus Bizal	Deduction
Correctness:	
Written to spec:	
Efficiency: It may be a little heavy handed to open and close the file for each write.	1
Maintainability/Clarity:	
User-friendliness:	
Good OOP practices On the otherhand, you probably do want to close the BufferedReader in your loadCabsFromFile method.  Sorting is probably best left to the UI.	2
Handles/prevents errors You catch errors in the loadCabsFromFile method; however you do so with the try/catch outside the while.  This means that once an error is reached, the rest of the cabs are not loaded.  Better to skip that record and report it but then load the rest of the cabs.	3
Correctly uploaded, named, etc.	
Misc:	
Raw Grade:	94
Late points:	
Style points: (added, not subtracted)	
Grade:	94

Nice work.
